### 3.Performance Specifications

Sound Pressure Level	MAX. 105dB (Adjustable Volume)	
Environmental Condition	Product was placed on a 300mm <sup>2</sup> base at a distance of 1 meter from its epicenter and a sine wave of 1kHz was played back * The sound level will vary upon the message and surrounding environment.	
Sound Reduction	20dB±2dB (Value based on maximum volume and sound 5 "Rapid Hi-Lo" playback)	
Light Source	LED	
Illumination (mcd)	Red (R): 2100mcd or more	Amber(Y): 2400mcd or more    Green (G): 5200mcd or more Blue (B): 700mcd or more                      White (C): 5500mcd or more
Flashing Rate	60 fps ±3	
Input Interface	Signal Wires: 16 (LED: 5 Wires/Sound: 8 Wires/Sound Reduction/Flashing Common/Common) Selection Switch, SD Card Slot	
Signal Input	Bit Input/Binary Input (Selectable)※1	
Number of Playback Messages	Bit Input: 8 Channels / Binary Input: 32 Channels	
Channel Priority	CH8>CH7>CH6>CH5>CH4>CH3>CH2>CH1 (Only bit input)	
Number of Sounds	32	
Memory Card	Recommended SD Card: SDV-2GP (Sold Separately)	
Data Format	FAT16	
Start-up Time	Power Start-up: 500ms or less / Signal Wire Input Delay: 300ms or less (Refer to sect. 3-3)	

※1 Level hold means input of sound reduction, which works during wire signal inputted.

#### 3-1. Setup Method

The settings for this product can be accessed from the front panel while in its installed condition. The following diagram indicates the accessible functions:

- Sound Volume Adjustment

The sound can be adjusted by the volume control.

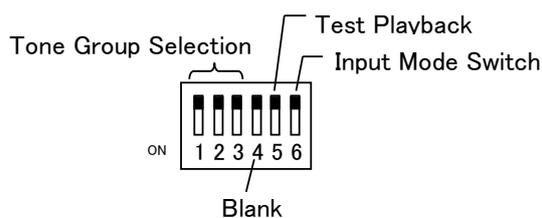

- Sound Playback Combination Method

By using an SD Card, the tones in Group H can be freely combined among the available 32 tones.

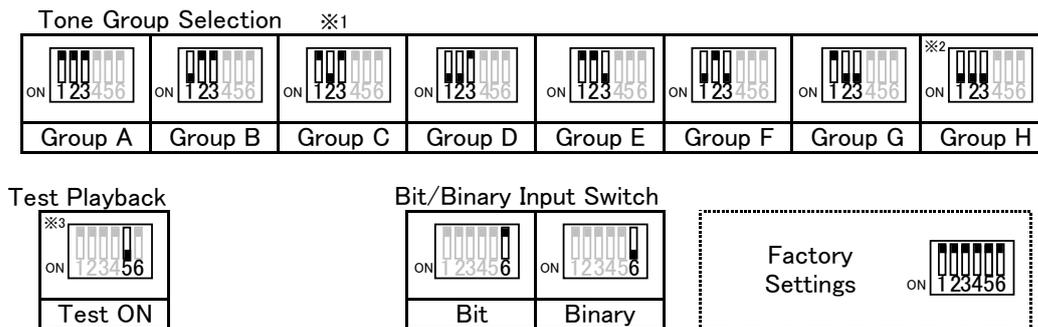

- Selection Switch

The following modes can be switched:

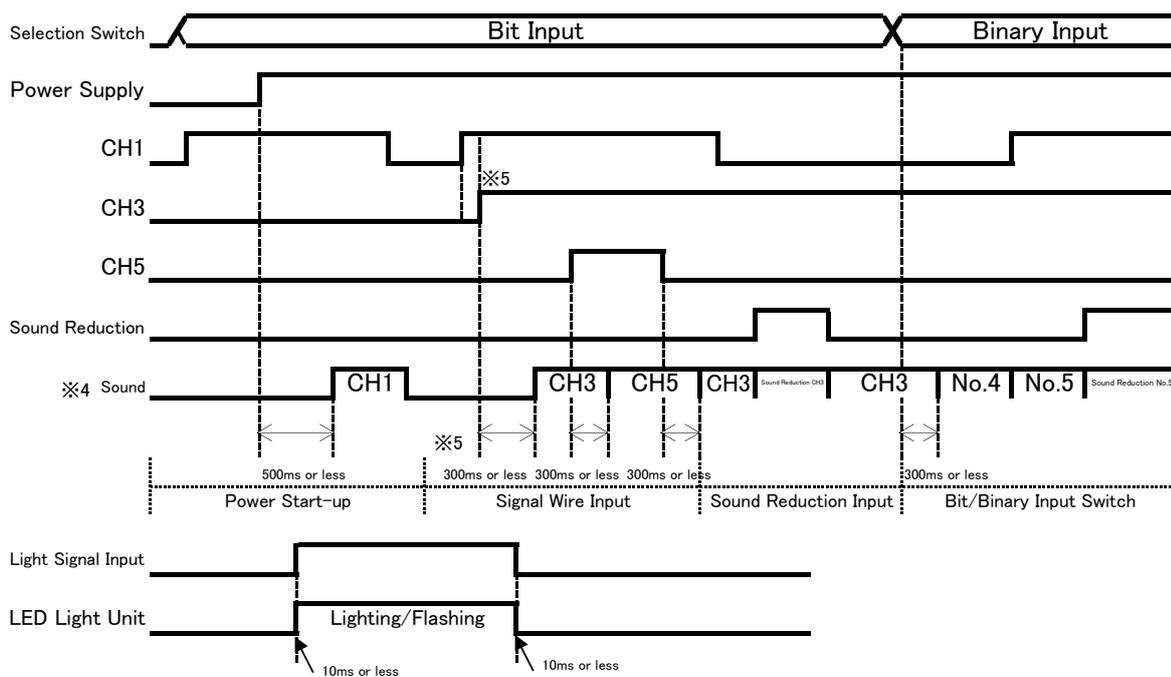

"Tone Group Selection," "Test Playback" and "Input Mode Switch" (DIP SW No. 4 is blank)

### 3-2. Selection Switch Setting

### 3-3. Input Timing Chart

※1 Each group has a total of 8 tones, from CH1 to CH8. Refer to "3-6. List of Tones."

※2 Tones can be freely combined with an SD card (sold separately) and transferred to group H. Refer to "3-7. Group H Rewriting Method"

※3 In the Test Mode, the sound stored in CH1 is always played back.

※4 Refer to the "List of Tones" section for playback sounds. (Refer to the CH number with Bit Input, and the tone number with Binary Input.)

※5 If the input is changed within 300ms before playback, it will take about another 300ms to activate the sound again.

## 3-4. Binary Input Mode Table

To select the Binary Input Mode, set DIP switch number 6 to the "ON" position.

The corresponding channels indicated below is played back for the

Binary Input Mode by short-circuiting the CH wires to the common wire.

Tone No. 5 "Rapid Hi-Lo" is played back if an input not shown in the table is made.

(CH7 and CH8 are reserved for the "STOP" and "Sound Reduction Function" inputs)

### 3-7. Group H Rewriting Method

With an SD Card (sold separately) , tones can be freely combined and transferred to group H. Follow the procedure below when rewriting the sound combination.

1. Prepare the SD card with the following data shown below.  
The file name must contain alphabetical characters. (Case Insensitive)  
The tone numbers in the text file must be designated by digits.

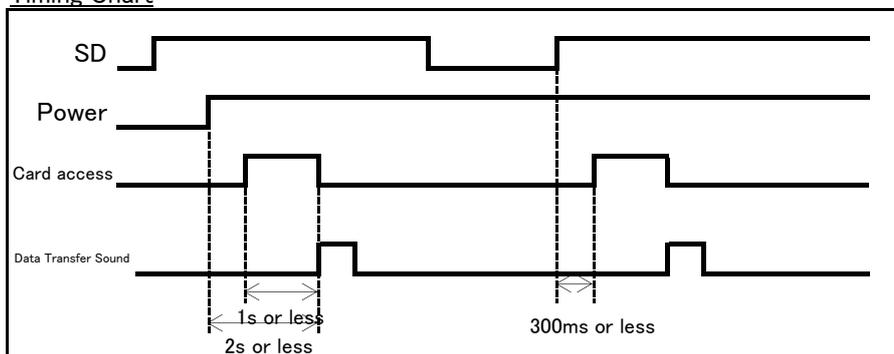

(例) 0204081605101520 (A type)

CH1:[2]Stutter (rapid intermittent horn) CH2:[4]Yelp (rapid siren) CH3:[8]Synthesized Bell  
 CH4:[16]Annie Laurie CH5:[5]Rapid Hi-Lo CH6:[10]Synthesized Melody  
 CH7:[15]Minuet CH8:[20]The camptown Races

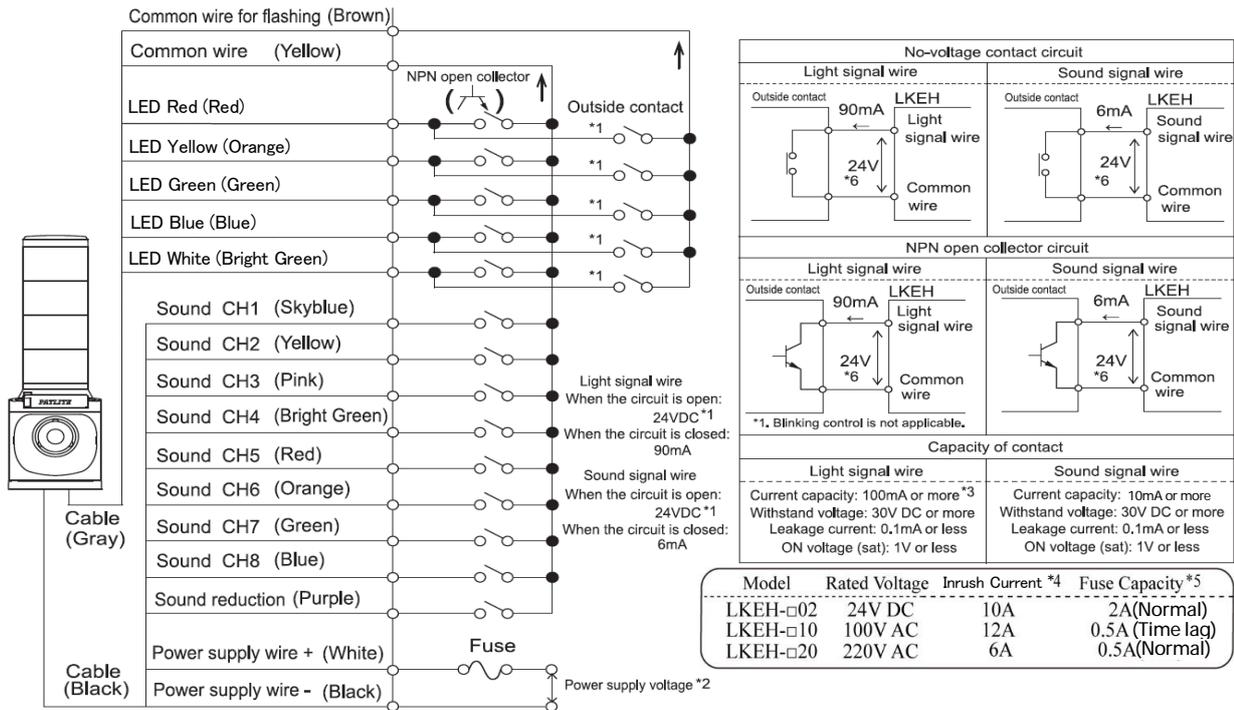

2. Make sure that the power is supplied to the product.
3. The data transfer starts automatically when the SD card is inserted into the card slot.
4. When the data transfer is finished, a continuous beeping sound is heard.  
When it is heard, pull the SD card out from the product.  
If there is no data transfer completion sound or any sound heard, the data transfer is not  
Ensure the volume is at an audible level so the beeping alarms can be heard during the rewriting procedure.
5. Select the tone for Group H, and confirm that the tone for each CH is stored as expected.

Timing Chart

- \* Do not remove the SD card until the transfer complete sound is heard when transferring the data.
- \* Once the data transfer starts, no messages will play back until the transfer complete sound is played, even if a signal input is entered during the data transfer procedure.
- \* If the SD card is inserted while a message is being played back, data transfer will start after the playback is finished.

## 3-8. Wiring Method

**\* Do not apply voltage on each signal wire.  
Or else, there is a risk of breaking down the product.**

- \*1. Blinking control is applicable only for the no-voltage contact circuit.
- \*2. Regarding LKEH-□02, connect the power supply wire(black) at the minus (terminal)
- \*3. Current capacity of the contact per one stack of the LED light units.
- \*4. At the maximum using voltage,and when power supply is switched on.
- \*5. For LKEH-□10,use a fuse of the time-lag type. If the normal type is used, there is a risk of melting down by Inrush current.
- \*6. In case of LKEH-□02,this is power supply voltage.
